CLIENT DETAILS: DIGITs Nigeria Election Watch Federal Republic of Nigeria Attn: National Steering Committee	INVOICE DETAILS: Invoice #: INV-2026-DIGEO-058M Date: August 5, 2026 Due Date: Upon Project Sign-off Total Value: NGN ₦58,000,000.00
--	--

EXPANDED TECHNICAL SCOPE & SYSTEM ARCHITECTURE SPECIFICATION

Full-scale engineering, deployment, high-concurrency optimization, and rigorous load testing for the **DIGITs Nigeria Election Watch Platform**. The system delivers real-time election monitoring across Nigeria's **176,846 polling units** across all 36 States and the FCT. Architected with redundant auto-scaling cloud infrastructure, WebRTC live video streaming clusters, mobile applications (Android & iOS), and a resilient data pipeline verified via k6/Locust distributed load testing to guarantee seamless stability under peak loads of up to **10,000,000 concurrent active citizen users** without degradation or crash.

Module / Component	Expanded Technical Deliverables & Specifications	Amount (NGN ₦)
1. Web Application & 11-Screen Control Center	- React 19, Vite, TanStack Router with SPA hydration fix - Custom OKLCH design system (deep navy, Nigerian green, ceremonial gold) 1-to-6 split-screen low-latency WebRTC live observer grid with click-to-maximize 11-screen Command Center (Live Ops, Evidence Queue, Incident Triage, Observers, Audit Log, Training, Users, Settings)	₦ 12,500,000
2. Cross-Platform Mobile Apps (Android & iOS)	- Native iOS & Android applications (React Native / Expo / Capacitor engine) - Forced GPS Geolocation gate & reverse geocoding check before camera release - On-the-spot 2-minute live camera recording with real-time SHA-256 hash sealing - Direct gallery upload blocking to eliminate pre-recorded / spoofed video - Cryptographic NIN (National Identity Number) identity verification hash	₦ 15,000,000
3. 10M Concurrent User High-Availability Backend	- Supabase Enterprise Cluster & PostgreSQL database auto-sharding with Read Replicas - LiveKit WebRTC Intake Server cluster with adaptive-stream & dynacast layer selection - Redis Memory Caching layer & Supabase Edge Functions for zero-cold-start proxying - Auto-scaling Kubernetes/Cloud edge deployment built for 10,000,000 peak concurrent users	₦ 17,500,000
4. DIGEO Accreditation Academy & Verification	6 self-paced interactive modules based on Electoral Act 2022 & BVAS protocols 24 EC8A arithmetic & incident triage assessment items with 70% passing threshold - Automated digital certificate generation with cryptographic verification QR code - Database Row-Level Security (RLS) role enforcement (Super Admin, Operator, Observer, Citizen)	₦ 5,500,000

5. Stress Testing, QA, Penetration Audit & SLA	• k6 / Locust distributed load testing simulating 10,000,000 concurrent active citizen viewers • Multi-region DDoS mitigation, failover redundancy, and automated backup vault • End-to-end cryptographic audit, security penetration testing & 24h media auto-purge vault • 12-month SLA maintenance & Election Day War Room live technical standby	■ 7,500,000

Subtotal:

■ 58,000,000.00

Taxes / Statutory Duties (Inclusive):

■ 0.00

TOTAL REVISED VALUE:	■ 58,000,000.00
----------------------	-----------------

- PAYMENT MILESTONES & SLA TERMS:
- **Mobilization Deposit (40% - ■ 23,200,000):** Core Web/Mobile platform setup & 10M infrastructure provision.
 - **Beta Sign-off (40% - ■ 23,200,000):** Completion of 10M concurrent user load test, security audit & app store submission.
 - **Final Acceptance (20% - ■ 11,600,000):** Production handover & live Election Day Control Center war-room deployment.
 - **Banking Info:** Zenith Bank / Access Bank | Account Name: **WYN-Tech Systems Ltd** | Account #: **1012345678**
 - **Maintenance Warranty:** 12-month SLA support, emergency patch response within 15 minutes, 99.99% uptime guarantee.
